The **seal** is intended for **Donner manual dispensers**. The seal needs to be replaced if your dispenser has stopped working - leaking or not dispensing properly. The cause could be a cracked or worn seal.

The seal is designed for Donner Click, Donner Wheel, Donner Top, or Donner Smart dispensers. The previously used seal is now replaced by **a new type of seal**, which uses two sealing rings. It is necessary to replace the entire center of the dispenser, simply unscrew the old center piece and replace it with a new one.

In the video, you will find **detailed video instructions** on how to easily replace the old seal in the dispenser with a new one.

Attention! The seal is not intended for Donner Tower and Cube dispensers.
