About the product

The set is intended for household use. It serves for connecting the sink overflow to the drain with the [Donner Basket](#), in case the siphon branch is already used for connecting the dishwasher, washing machine, and the like. When installing the sink basket in a commercial sink, this set is not necessary, as these sinks are not equipped with an overflow.

Assembly

The branch component is simply inserted between the outlet and the siphon. The minimum distance from the bottom of the sink to the center of the waste pipe in the wall is 24 centimeters when using the outlet connection set (when using a standard siphon). The set also includes a rear part for connecting the sink's side overflow, which is usually not necessary to use.

Parameters

Basic parameters

Warranty: 2 years
